IV- NEED ANALYSIS

It was considered essential to revise the curriculum of Three year diploma course in Chemical Technology (Rubber & Plastic) to accommodate new areas of technology as well as update and modernise the existing course contents so as to make it more relevant to the needs of the world of work. The world of knowledge is evergrowing and there always remains something to aid to make the students update. So it is imperative to make relevant changes in the curriculum in the form and content both. Accordingly, a workshop was held to look into the gaps in the existing curriculum and revise the same in semester system. A number of professionals representing various fields, organisations, higher technological institutions and polytechnics were involved in updating the curriculum for Three year diploma course in Chemical Technology (Rubber & Plastic).

A number of formal and informal workshop were held in this institute it self and other institutions also for this purpose and upshots of these workshop have been properly arranged to systematise classroom teaching.

Based on the above, curriculum of diploma course in Chemical Technology (Rubber & Plastic) was revised and developed in semester system.

The important features of the presently proposed curriculum are as given below -

1. In the second year level, in the paper " Technolog of Plastic Materials and Technology of Natural and Synthetic Rubber" are clubbed and renamed as "Technology of Plastics and Rubber Materials".
2. In the second year level, a new paper added as named "Chemical Engineering Thermodynamics and Kinetics".

With all these changes, it is hoped that the new proposed course will prove conducive to students for employment point of view.

V- PROFILE DEVELOPMENT

A tool in form of a questionnaire was designed and sent to various organisations, industries, higher technological institutions and polytechnics for getting information about job opportunities, manpower requirements and job activities of diploma holders in Chemical Technology (Rubber & Plastic).

Feed back taken from the experts through questionnaire, personal interviews and workshops was analysed and a draft structure of curriculum was prepared in the workshop held at the I.R.D.T., U.P., Kanpur adopting the following procedures :

1. Listing job potential and job activities.
2. Analysing activities into knowledge and skill.
3. Deriving the course objectives.
4. Deriving subject areas from course objectives.
5. Planning horizontal and vertical organisation of subjects.
6. Developing detailed course contents and coverage time.
7. Determining resource input in terms of human and information resources.

Review of this draft of the structure of curriculum was done in a workshop held at the I.R.D.T., U.P., Kanpur through a group of experts from field , higher technological institutions and polytechnics.

It is hoped that the revised curriculum for Three Year Diploma in Chemical Technology (Rubber & Plastic) will prove useful in producing the desired type of middle level trained man power for Chemical Technology field.

[Also common to First year Diploma Course in Chemical Technology : (1) Fertilizer Technology, (2) Rubber and Plastic Technology]

Rationale

Drawing, which is known as the language of engineers, is a widely used means of communication among the designers, engineers, technicians, draftmen and craftsmen in the industry. The translation of ideas into practice without the use of this graphic language is really beyond imagination. Thus, for the effective and efficient communication among all those involved in an industrial system, it becomes necessary that the perosnnel working in different capacities acquire appropriate skills in the use of this graphic language in varying degrees of proficiency in accordance with their job requirements.

Generally speaking, an engineering technician working at the middle level of the threetier technical manpower spectrum, is required to read and interpret the designs and drawings, provided to him by technologists and subsequently to translate them to the craftsmen for actual execution of the job.

This course in Engineering Drawing has been designed, keeping in view, the above refered job functions of a technician in the industry. This preliminary course aims at building a foundation for the further courses in drawing and other allied subjects. The contents of the course have been selected as to form a core for the various deversified fields of engineering. It is expected that at the end of this session, the students acquires sufficient skill drafting and some ability in spetial visualization of simple objects.
